Subject: preliminary PDI WP figure
[Project Approach FC - D4a.pdf](#)

Alice,

Per discussion last week, please see the attached preliminary figure we are working on to summarize the Pre-Design Investigation Work Plan (be sure to "Enable All Features" if viewing in Adobe and certain graphics don't initially appear).

Our goal is to generate a single conceptual summary of a very complex investigation effort, recognizing more and more detail will be provided as we drill further into the text body and work component attachments.

Not that you need it, but advice I've provided for non-technical readers so far on initial digesting is to review the first 3 columns almost as independent bullet lists each to get a feel for the design requirements, the existing data sets we're reviewing, and the data gaps; then view the PDI Implementation section as a relative timeline, ignoring all the arrows. Finally, once all that makes sense, it becomes a little easier to pick any singular topic of interest in column 3 and follow all the relational connections. The relative schedule in particular is what I was hoping to solicit any initial thoughts from you as we assemble more detailed schedules, though any and all observations are welcome. The figure is still within draft document generation of course.

Because the figure is intended for a report, it's pretty detailed as a Powerpoint slide, but we were thinking about ending with this as a final slide for our Fish Meeting this Friday for some relative content of the meeting objectives to the whole, and the general timing of things to come. John Schaffer with Tetra Tech will do the heavy lifting on the meeting topic, but this might be an opportunity to have Gary Braun or us chime in with overall document vision as a wrap-up. Alternatively, we could discuss independent of the whole group if you had a few extra minutes following our meeting completion.

I travel tomorrow morning but will be in Newark by mid-day, and can be available any time prior to meeting Friday if you'd like to discuss.

Juan
